PROFESSIONAL SUMMARY

Third-year B.Tech Computer Science student and founder of VISIONIX, focused on building intelligent systems that predict problems before they happen. Combines machine learning, predictive analytics and modern full-stack engineering to turn complex ideas into clean, scalable products — from business decision intelligence and fraud detection to sustainability and founder tooling. Experienced in leading a 13-member team, owning products end to end, and communicating ideas visually through design and video.

EXPERIENCE

Founder — VISIONIX — Hyderabad, India

- Founded a product- and service-based company dedicated to solving real-world problems with AI-powered solutions.
- Lead a team of 2 co-founders and 10 crew members, setting product direction and coordinating AI engineering, product development and system design.
- Own the flagship product, VISIONIX Decisions, from concept and architecture through build and launch.
- Run the company's product portfolio across business intelligence, security, consumer AI and drone services.

Focus: AI Engineering · Product Development · System Design · Machine Learning · Full Stack Development

PROJECTS

Veixon Co-Founders — AI co-founder platform for early-stage founders — veixon-cofounders.vercel.app

- Built an "AI co-founder from day one" that guides founders from raw idea to early execution.
- **Idea analysis & validation** — evaluates a startup idea and surfaces strengths, risks and gaps.
- **90-day execution planning** — turns the idea into a structured, time-boxed roadmap of actionable steps.
- **Decision simulation** — models scenarios so founders can compare options before committing.
- **Founder accountability** — a dashboard that tracks progress against the plan.

Stack: AI/LLM workflows · Web dashboard · Deployed on Vercel

EcoConnect AI — AI-powered waste management platform — Hackathon project

- Designed a platform that connects citizens, delivery agents and NGOs/industries so collected scrap reaches the recyclers that need it.
- **User portal** — citizens scan and upload garbage to raise a pickup.
- **NGO / Industry portal** — verified industries register the waste types they want, enrol service areas and get a nearby delivery agent assigned per pickup.
- **Delivery portal** — location-based agents with registered vans get a unique agent ID and batched bulk pickups to cut extra travel; the hub is notified on each drop.
- Built a 3D, scroll-driven WebGL landing page and role-based signup that routes each user to the right portal.

Stack: AI image-based waste reporting · WebGL · Role-based web app

VISIONIX Decisions — AI business intelligence platform — About to launch

- AI-powered BI platform that helps businesses make smarter strategic decisions.
- Combines predictive analytics with intelligent automation to turn business data into forward-looking recommendations.

Stack: Python · Machine Learning · Predictive Analytics · Full Stack

Chakravyuh — AI fraud detection system

- Detects suspicious activity and fraud patterns using machine learning and intelligent behavioural analysis.
- Flags anomalies in user behaviour to catch fraud early, before it causes losses.

Stack: Machine Learning · Pattern Detection · Behavioural Analytics

IntelliRecipe — AI recipe generator

- Generates personalised recipes from the ingredients a user has, their taste preferences and dietary requirements.

Stack: AI · Machine Learning · Full Stack

#DFA2Z — AI drone services platform — Upcoming

- AI-based drone service platform delivering aerial solutions and intelligent automation for diverse industries.

Personal Portfolio — interactive developer portfolio

- Designed and built a responsive portfolio with scroll animations, an interactive terminal hero and a product showcase.
- Contact pipeline that stores messages through a server API with Firebase and delivers email notifications via EmailJS / Nodemailer.

Stack: Next.js · React · TypeScript · Tailwind CSS · Firebase · Vercel

CERTIFICATIONS

Introduction to Machine Learning — AWS Training & Certification — May 2026

Covered core ML concepts — supervised vs unsupervised learning, the end-to-end ML lifecycle (data preparation, training, evaluation, deployment) and how ML is applied to real business problems on AWS.

View certificate ↗

Getting Started with AI on Jetson Nano — NVIDIA Deep Learning Institute — Dec 2025

Hands-on edge AI: set up the NVIDIA Jetson Nano, collected image data, and trained and deployed deep-learning models (image classification and regression) with PyTorch on an embedded GPU device.

Verify on NVIDIA ↗

Cyber Security Job Simulation — Deloitte (Forage) — Nov 2025

Completed a practical simulation as part of Deloitte's cyber team — investigated a security breach by analysing web activity logs to identify suspicious behaviour and answer client questions. Verification code: HcyJrfExZ8gAQJTYj.

Full-Stack Development 101 — Simplilearn — May 2026

Foundations of full-stack web development — front-end building blocks (HTML, CSS, JavaScript), back-end and server concepts, databases and how the layers connect into a working application.

View certificate ↗

Python (Basic) — HackerRank skill certification — Jul 2025

Assessed on Python fundamentals — data types, operators, control flow, strings, lists/dictionaries, functions and basic object-oriented programming.

View certificate ↗

Java (Basic) — HackerRank skill certification — Oct 2025

Assessed on core Java — classes and objects, data types, loops and conditionals, methods and OOP principles.

View certificate ↗

TECHNICAL SKILLS

Languages	Python, Java, C++, JavaScript, TypeScript
Web & Frameworks	React, Next.js, Flask, Tailwind CSS, REST APIs
AI / ML	Machine Learning, Predictive Analytics, Pattern & Anomaly Detection, Prompt Engineering, AI System Design, Edge AI (Jetson Nano)
Cloud & Tools	Firebase, Vercel, AWS (fundamentals), Git & GitHub
Product	Product Development, System Design, Team Leadership, Startup Planning

OTHERS — DESIGN & EDITING

Graphic Design	Canva — social media creatives, posters, presentations and brand visuals
Photo Editing	Adobe Photoshop — photo retouching, compositing and image manipulation
Video Editing	DaVinci Resolve — video editing, colour grading and product/promo videos

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering — 3rd Year · Pursuing

Focus areas: Artificial Intelligence, Machine Learning, Full Stack Development

STRENGTHS

- Building products end to end, from idea to launch
- Translating complex problems into simple, usable AI tools
- Leading and coordinating a startup team
- Visual communication through design and video
